ARMY RESEARCH TEAM OPERATING AT LOS ALAMITOS ARMY AIRFIELD IN JUNE

LOS ALAMITOS, Calif. – A team from the U.S. Army Communications-Electronics Research, Development and Engineering Center at Fort Belvoir, Va., will be conducting a sensor technology project at Los Alamos Army Airfield (LAAAF) for several weeks beginning June 7th.

The team will be collecting coastal fog data only on nights when fog is most prevalent, at which times it may be necessary to initiate operations during the late night or early morning hours to accomplish their mission.

Late night or early morning operations are not expected to exceed one hour and will be conducted using one UH-60 Black Hawk helicopter on the LAAAF ramp with its engine operating or at a low hover. Aircraft will not be operating in the traffic pattern or over any residential areas.

As always, efforts will be taken to minimize inconvenience to our neighbors.

For additional information, contact Col. (CA) Richard Lalor at 562-795-2096 (office), 626- 733-1170 (mobile), or via email at richard.w.lalor2.vol@mail.mil
